

System Request—ENR System Development

Project Sponsor: ENR Management, Marketing

Business Need:

This project has been initiated to enhance passenger experience by developing a digital ticketing system accessible via a web app, mobile app, and desktop app. The system aims to improve ticket booking, provide real-time train tracking, and offer additional services such as seat selection, healthcare, and meal reservations. The implementation of this system will streamline operations, increase ticket sales, and provide a more efficient and modern travel experience for customers.

Business Requirements:

Using the web, mobile, and desktop platforms, customers will be able to access and use digital ticketing services. The specific functionality that the system should have includes:

- View train schedules and seat availability.
 - Book train tickets digitally.
 - Track train departure and arrival times in real-time.
 - Reserve additional services (Healthcare, Meals).
 - Purchase digital ticketing gift cards.
 - Secure payment processing and automated refund management.
 - Customer account creation and loyalty program integration.
-

Business Value:

The ENR System Development is expected to improve operational efficiency and enhance customer satisfaction through modernized ticketing solutions. The system will:

- Reduce ticket booking times and streamline operations.
- Increase revenue from digital ticket sales and service reservations.
- Improve customer satisfaction through seamless travel planning.

- Enhance marketing effectiveness with targeted promotions.
- Provide data analytics on customer behavior for better service optimization.
- Reduce congestion at ticket counters, improving station management.
- Strengthen ENR' s position as a leading transportation provider through digital transformation.

Conservative estimates of tangible value to the company include:

- \$1.2M in revenue increase from digital ticket sales in the first year.
 - \$500,000 in additional revenue from service reservations.
 - 5% increase in website and mobile app users within the first 20 days.
 - 15% increase in digital ticket sales by March 1, 2025.
 - Reduction in operational costs through automation of manual processes.
-

Special Issues or Constraints:

- The project must be completed within six months to maintain a competitive advantage.
- The system must integrate with existing ENR databases and legacy infrastructure.
- Security and data privacy compliance are critical due to customer payment and personal data.
- Marketing efforts must ensure high adoption rates among travelers to maximize business impact.
- Adequate staff training must be conducted to ensure seamless adoption of the new system.
- Potential resistance from traditional ticketing users must be mitigated through awareness campaigns and user-friendly design.
